

Enhancing biosafety and biosecurity across international borders

Presenters

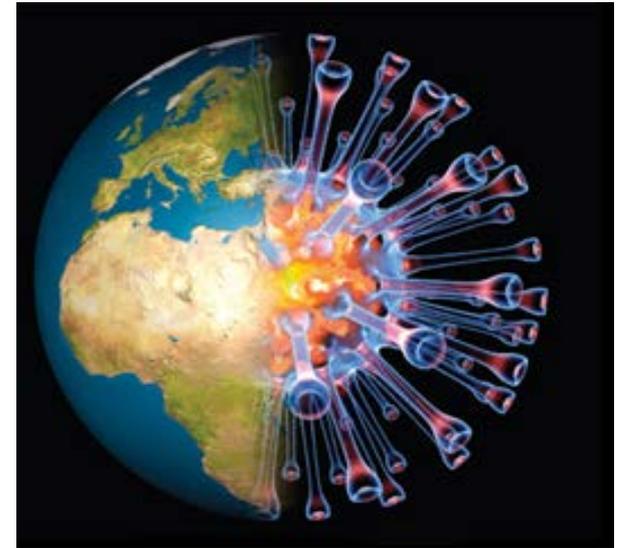

Catherine Mancini
Biosafety Specialist Senior
CDC Alternate Responsible Official

Irene Mendoza, MS, RBP
Associate Biosafety Officer
CDC Alternate Responsible Official

Biological pathogens

- A threat anywhere is a threat everywhere
- Infectious diseases know no borders
- Pathogens do not discriminate
- Infectious agents will continue to emerge and reemerge from nature or bioterrorism

<http://www.oneillinstituteblog>.

<https://www.belfercenter.org/publication>

Front Public Health. 2017; 5: 148

Ebola outbreaks

Ebola virus

- Human, NHP vectors
- BSL-4 pathogen, highest containment required

December 2013 - Patient zero identified in Guinea

October 1, 2014 - US patient with disease announced (deceased October 8)

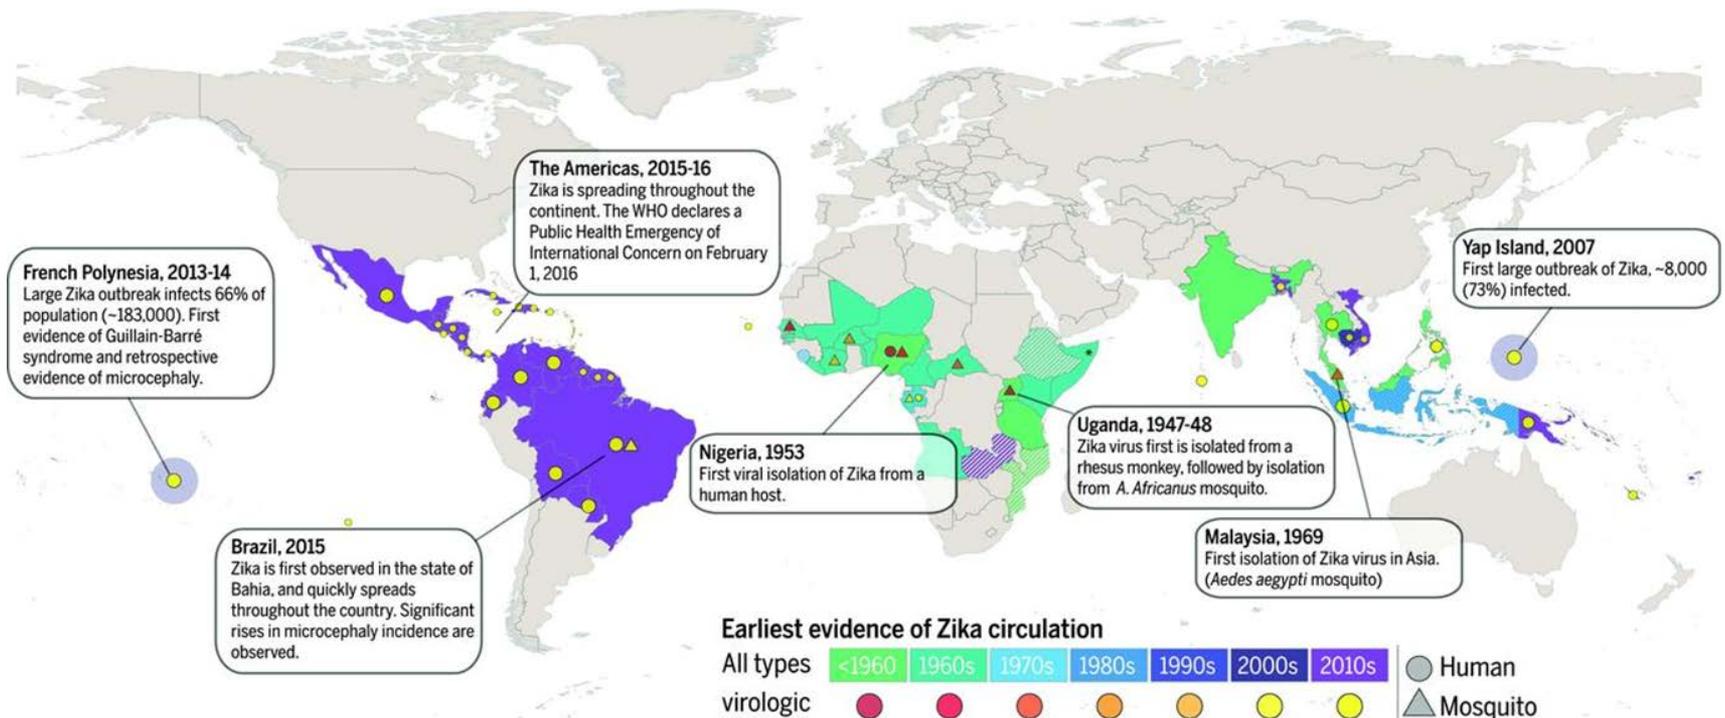

April 2018 - Democratic Republic of Congo

<http://www.bbc.com/news/world-africa-28755033>

Zika outbreaks

Current and potential distribution of ZIKA virus

March 2015 - Brazil

October 2015 - Colombia, El Salvador, Guatemala

January 2016 – Hawaii, US

Zika virus

- Mosquito vector

US and Mexico border statistics

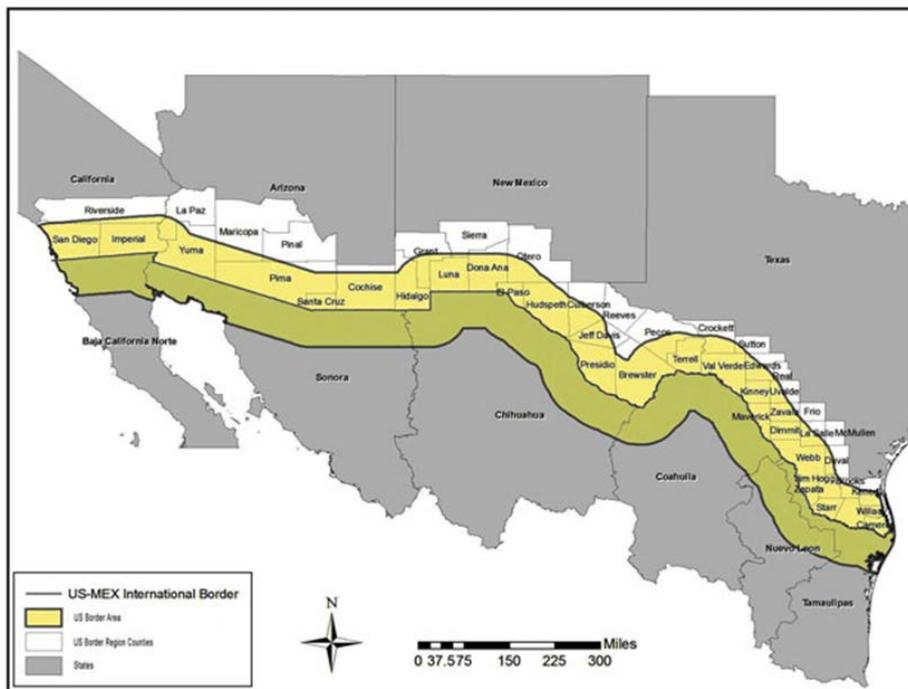

- 1,954 miles of border (30 miles maritime)
- 35 million US tourists visit Mexico each year (including 700,000 medical tourists)
- 15 million Mexico tourists visit the US each year
- Mexico is the largest supplier of agricultural products to the US

US and Mexico border interface

Common interests:

- Epidemiological surveillance
- Technology transfer
- Economic importance
- Preservation of natural resources

Regulations and guidance

	US	Mexico
CDC Biological Select Agent and Toxin Regulations	✓	
NIH Guidelines for Research Involving Recombinant or Synthetic Nucleic Acid Molecules	✓	
Convention on Biological Diversity		✓
Biological Weapons Convention	✓	✓
Transport of Infectious Substances Guidelines	✓ (DOT/IATA)	✓ (WHO/IATA)
Emerging Technologies Regulations		

ABSA

The American Biological Safety Association (ABSA International)

- Founded in 1984 to promote biosafety as a scientific discipline
- Serves the growing needs of biosafety professionals throughout the world
- More than 20 participating countries
- Website: **absa.org**

ABSA
INTERNATIONAL

ABSA (cont.)

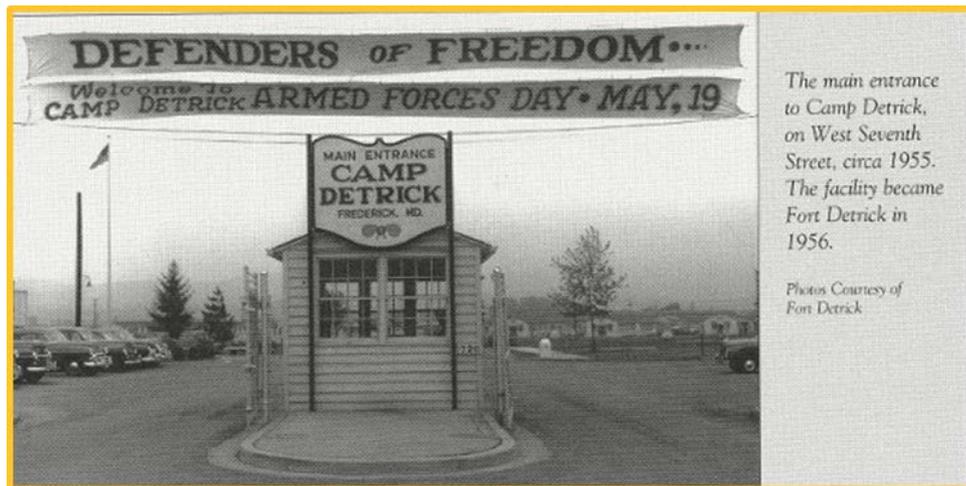

First biological safety conference

April 18, 1955 at Camp Detrick, Frederick, Maryland

14 representatives from:

- Camp Detrick (now Fort Detrick)
- Pine Bluff Arsenal, Arkansas
- Dugway Proving Grounds, Utah

Shared knowledge and experiences regarding biosafety, chemical, radiological, and industrial safety issues found at the three principal U.S. Army biological warfare laboratories.

Biosafety hot topics

1950s

- Class II biosafety cabinets (BSCs)
- Disinfection
- Paraformaldehyde
- Lab design criteria and air sampling

2010s

- Biological and physical containment to maintain the safety of the workers, general public, and the environment
- Synthetic biology, gene editing, and gene drives
- Dual Use Research of Concern (DURC)
- Gain of function
- Do-it-yourself (DIY) Biology
- Biosecurity
- New mechanisms for inspection or enforcement
- The balance between ethics, the freedom of inquiry, the right to publish, public health, and national security
- Research across national boundaries

1954 15" color TV vs. 2014 50" HDTV

In 1954, RCA introduced the first "fully electronic" color TV. It had a 15 inch screen and sold for **\$1,000** (\$8,779 in 2014 dollars). At an average hourly wage of \$1.97, it would have taken **508 hours** of work to buy it.

On Black Friday 2014, Walmart sold 50 inch high-definition flat-screen TVs for **\$218**. At an average hourly wage of \$27.92 (2013), it would have taken **7.8 hours** of work to buy it. That amounts to a **98.5 percent decrease** in terms of working hours.

Arizona Biosafety Alliance (AZBA)

Co-founded in 2013 by:

- David Gillum, ASU Chief of Staff for Environmental Health and Safety
- Kathleen Kennedy, Translational Genomics Research Institute (TGen), Manager of Environmental Health and Safety

Website: azbiosafety.org

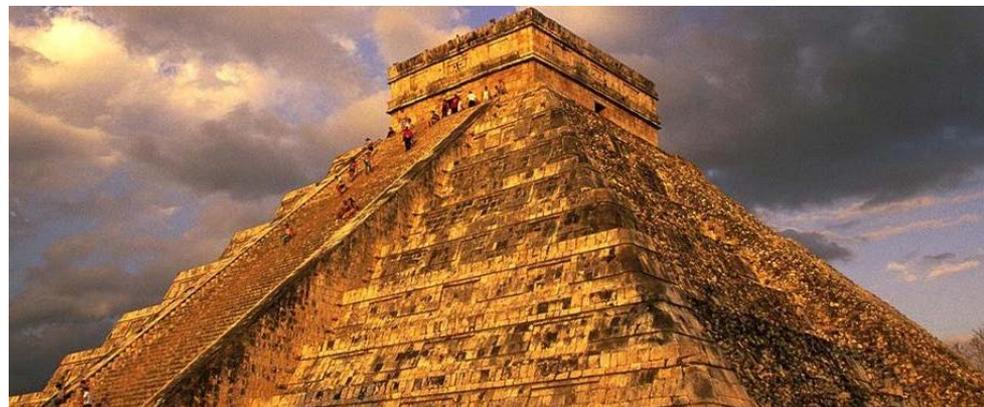

ASU and AmexBio initiatives

ASU in Mexico Program

“Strengthen the relationship with Mexico and other Latin American countries to leverage the capabilities of ASU and those of the Mexican partners to expand the benefits of education and advance solutions that improve our local and global communities.”

Webiste: <https://mexico.asu.edu/>

ASU and AmexBio goals

- Strengthen biosafety and biosecurity across the border
- Share best practices, training, research collaborations, and information on emerging biological technologies
- Develop a compliance infrastructure to address emerging technologies
- Attract collaborators and students to ASU and university programs in Mexico

AMEXBIO
Asociación Mexicana de Bioseguridad A. C.

ASU and AmexBio achievements

- Keynote lectures at AmexBio conferences (2015-2018)
- Introductory synthetic biology course (2015)
- Intermediate synthetic biology course (2016)
- ASU researcher presentations: Dr. Maldonado-Ortiz
- Safety posters

USO CORRECTO DEL AUTOCLAVE (Esterilizador)

Toda el personal que usa las instalaciones del Centro Nacional de Seguridad Biológica debe de leer cuidadosamente el manual de instrucciones de uso del autoclave (esterilizador) y seguirlo estrictamente. Es importante seguirlo para evitar accidentes y garantizar la seguridad de las actividades.

SECCIONES	Descripción	Preparación	Operación	Operación del Autoclave	Selección de los Autoclaves
PREPARACIÓN	<p>Operación:</p> <ol style="list-style-type: none"> 1. Abrir la puerta del autoclave. 2. Retirar los residuos de la cámara. 3. Limpiar la cámara del autoclave. 4. Verificar que la cámara del autoclave esté limpia. 5. Verificar que la cámara del autoclave esté seca. 	<p>Operación:</p> <ol style="list-style-type: none"> 1. Preparar los recipientes para esterilizar. 2. Colocar los recipientes en el autoclave. 3. Verificar que los recipientes estén correctamente colocados. 4. Verificar que los recipientes estén correctamente etiquetados. 5. Verificar que los recipientes estén correctamente sellados. 	<p>Operación:</p> <ol style="list-style-type: none"> 1. Abrir la puerta del autoclave. 2. Retirar los recipientes del autoclave. 3. Verificar que los recipientes estén correctamente etiquetados. 4. Verificar que los recipientes estén correctamente sellados. 5. Verificar que los recipientes estén correctamente colocados. 	<p>Operación:</p> <ol style="list-style-type: none"> 1. Abrir la puerta del autoclave. 2. Retirar los recipientes del autoclave. 3. Verificar que los recipientes estén correctamente etiquetados. 4. Verificar que los recipientes estén correctamente sellados. 5. Verificar que los recipientes estén correctamente colocados. 	<p>Operación:</p> <ol style="list-style-type: none"> 1. Abrir la puerta del autoclave. 2. Retirar los recipientes del autoclave. 3. Verificar que los recipientes estén correctamente etiquetados. 4. Verificar que los recipientes estén correctamente sellados. 5. Verificar que los recipientes estén correctamente colocados.
SELECCIÓN DE LOS AUTOCALVES	<p>Operación:</p> <ol style="list-style-type: none"> 1. Verificar que el autoclave esté correctamente etiquetado. 2. Verificar que el autoclave esté correctamente sellado. 3. Verificar que el autoclave esté correctamente colocado. 4. Verificar que el autoclave esté correctamente etiquetado. 5. Verificar que el autoclave esté correctamente sellado. 	<p>Operación:</p> <ol style="list-style-type: none"> 1. Preparar los recipientes para esterilizar. 2. Colocar los recipientes en el autoclave. 3. Verificar que los recipientes estén correctamente colocados. 4. Verificar que los recipientes estén correctamente etiquetados. 5. Verificar que los recipientes estén correctamente sellados. 	<p>Operación:</p> <ol style="list-style-type: none"> 1. Abrir la puerta del autoclave. 2. Retirar los recipientes del autoclave. 3. Arizona biosecurity workshops

2016 and 2017: Sponsored by ASU, AZBA and FBI

- First of its kind international workshop
- Bridge gaps in knowledge between policy experts and professionals managing biosecurity risks
- Define biosecurity as it relates with biosafety

Speakers from:

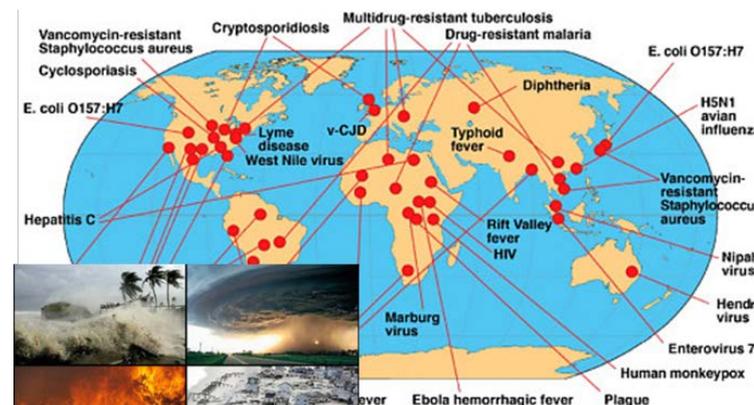

- ASU, AZBA, and Federal Bureau of Investigations
- Centers for Disease Control
- NIH Office of Science Policy
- Native American Tribal Nations
- AmexBio

Website: <https://www.asu.edu/ehs/biosafety/ASU-Biosecurity-Workshop-2017.pdf>

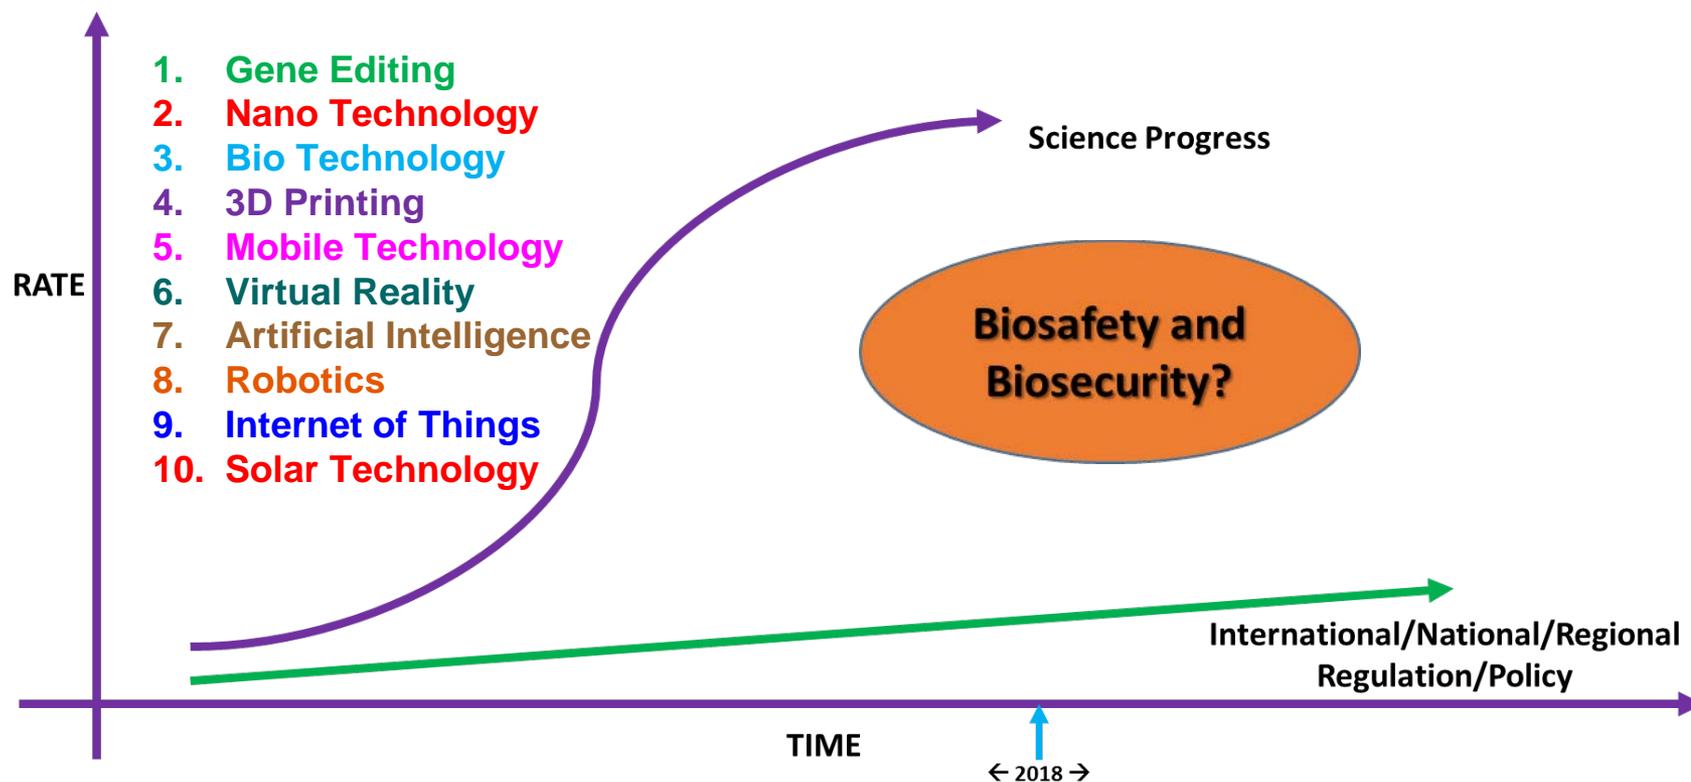

Why ASU and AmexBio?

Shared transnational threats:

- Infectious disease emergence
- Hazardous materials transport
- Environmental impacts
- Drug trafficking and corruption
- Unemployment and poverty
- Migration challenges
- Emerging technologies
- Lack of communication

Why ASU and AmexBio?

Modified from: *Biosecurity: Responsibility of the research and security communities* (So, 2017)

Possible threats to US and Mexico

- Unknown outbreaks
- Bioterrorism
- Inappropriate waste disposal
- Intentional release of GMOs
- Protection of native seeds, plants, and water sources
- Loss of tourism from biological-related hazards

iGEM Foundation

International Genetically Engineered Machine (iGEM) Foundation

- **iGEM Competition** - an international team competition of synthetic biology students
- **Labs Program** – resources for academic labs
- **Registry of Standard Biological Parts** - a growing collection of genetic parts to use for building biological systems

iGEM Competition

2018

344 teams

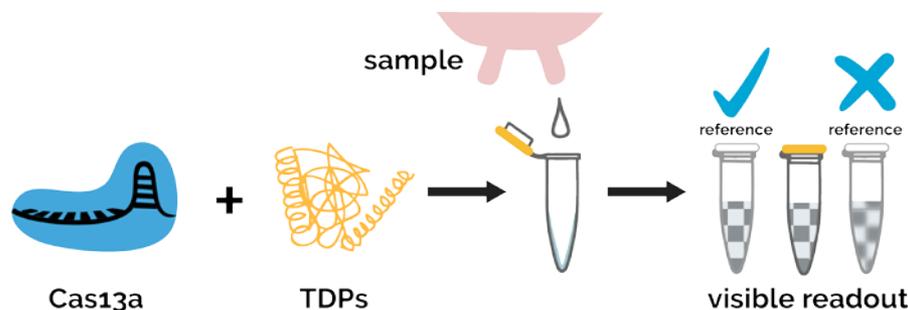

- 80 from US
- 4 from Mexico
- 11 from Latin America

2017

337 teams

- 73 from US
- 3 from Mexico
- 12 from Latin America

TU Delft: Tool to test if antibiotic-resistant bacteria are present

Future goals

Develop international governance strategies for:

- Recombinant and synthetic nucleic acid research
- Highly pathogenic agents
- Gene drives

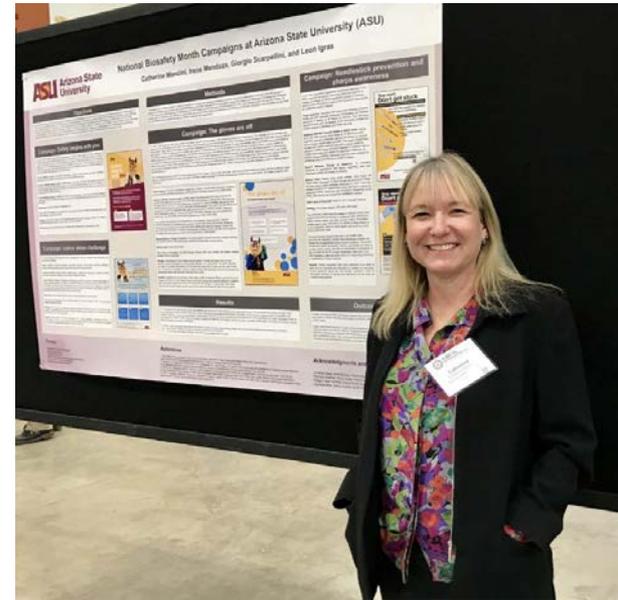

ASU and AmexBio collaboration with universities in Mexico:

- Offer biosafety and biosecurity courses and degrees

AZBA and AmexBio partnerships:

- Invite speakers and recruit members

Expand efforts to Central and South America as well as Canada

Overview of the
*NIH Guidelines
for Research Involving
Recombinant or
Synthetic Nucleic Acid
Molecules*

 National Institutes of Health
Office of Biotechnology Activities

UNAM

How can you help?

1. Design and promote community engagement opportunities for students and the public
2. Create international biosafety and biosecurity course materials and resources
3. Provide scholarships, fellowships, and internships to students from Mexico, Central, and South America
4. Collaborate on biosafety and biosecurity research and publications
5. Present at AZBA and AmexBio (and join as members)
6. Join us in sponsoring the Third Annual Arizona Biosecurity Workshop in December 2018 at ASU

Thank you!
