

Jennifer B McCormick, PhD, MPP joined the departments of Medicine and Health Sciences Research at Mayo Clinic in 2008. She was recruited to Mayo Clinic to assist with the development and enhancement of the CTSA research ethics resource, including educational offerings in research ethics, and science and public policy. In this capacity she directs Mayo Clinic's Responsible Conduct of Research course and provide lectures on research ethics, social responsibility, and policy in other courses. Dr McCormick is also a consultant on the Mayo Clinic's Research Ethics Consultation Service, working closely with the IRB and the Research Subject Advocate to consider human participant research issues, including how best to protect participant privacy and confidentiality in this age of genomic medicine. Much of her work focuses on empirical studies aimed at enhancing human participation in research, and operationalizing the concepts of professionalism and social responsibility in biomedical research. Dr McCormick has had a continued interest in genetic research and biobanking, the policy implications of data sharing, the challenges to protecting participants' privacy and confidentiality, and the ethical complexities presented by translating genomic research findings into clinical and public health domains. She currently leads some of the biomedical ethics activities for the Mayo Clinic Center for Individualized Medicine (CIM), serving as a discussion moderator for the CIM's Community Advisory Board and working with CIM leaders in the planning and implementation processes for the Mayo Clinic Individualized Medicine Clinic. Dr McCormick received her doctorate in molecular cellular biology and masters in public policy from the University of Michigan. She was a Center for Excellence in ELSI research training fellow at the Stanford Center for Biomedical Ethics prior to joining the Mayo Clinic.
